
URGENT PUBLIC HEALTH WARNING

WARNING: What you are about to see is highly controversial

It's based on information obtained from 44,000 pages of internal government files that they never wanted you to see.

It reveals details of a health scandal that could be poisoning you and your family, all in the name of political power and corporate greed.

Fox News has already been forced to censor coverage of this scandal.

Dear Reader,

Don't you find it strange that you and I spend more money on healthcare than the average person in any other country in the world...

Yet people in Norway, Switzerland, Canada, U.K., France and other developed nations all outlive us.

Why are we not living longer, despite all the money we spend on doctors, hospitals and drugs?

Well, about six months ago I began to search for answers to that simple question...

The results I've uncovered will shock you...

As you're about to see, you and I – along with the rest of America – have all become secret guinea pigs in a massive, 20-year-long health experiment...

All thanks to a dangerous alliance between the government and corporate America.

Now before you start guessing, what you're about to see has nothing to do with the drug industry, our healthcare system, or anything else you're likely thinking.

This is the shocking story about our health that you've never heard before...

In short, what I've found is that the food we're eating could be poisoning us.

I'm talking about food you probably have in your kitchen, in your refrigerator, right now. Food you're going to eat tonight. Food you're going to feed your spouse. Your children. And your grandchildren.

And food that's could be killing us early, in the name of corporate profits and political power.

Did you know, for example, that in 1998 an unprecedented coalition of scientists, religious leaders, health professionals and consumers sued the government?

This lawsuit, filed in Federal District Court, forced the FDA to turn over 44,000 pages of internal government memos into the public domain.

Memos that our own government NEVER wanted you to see...

Memos that reveal shocking proof of this health scandal that could be making you and your family sick.

It's a conspiracy that runs right from a few massive food producing companies all the way up to the highest of ranks: The government of the United States of America.

It's a tangled web of corruption that keeps politicians in power and safeguards the profits of certain corporations... while putting your life, my life and our families' lives at risk.

And they've managed to keep this scandal a secret for the past 15 years. But today I'll expose all the details...

I'm going to name names... And tell you about the content of one little-known internal document I've uncovered from food companies with files so secret that they're labeled...

“CONFIDENTIAL, READ AND DESTROY”

These internal memos are the proverbial smoking gun -- documents that prove the food we're eating may be causing us and our loved ones to die early deaths, despite having some of the world's best health care.

And most importantly, I'm going to show you simple steps you can take today to “opt-out” of the game they've planned for us. To take your health back into your own hands. To stop poisoning your body with their modified food that's likely making us sick.

These are steps I'm taking for my own wife and four kids. And if you want to live a longer, healthier life... I recommend you take these steps immediately.

I can't guarantee they will make you live to 100 years old.

But I can *promise* that you'll be greatly better off than those who ignore this message and continue to eat potentially dangerous food.

And believe me when I say, if you close this window, there's a good chance this presentation may not be here when you come back.

There are powerful players that hope you NEVER see this message. And they're not going to be happy that I'm blowing the whistle on their game.

Look, I'm not asking you to believe me right now. I'm simply asking that you give me the next few moments of your time... and approach what you're about to see with an open mind.

Once you see all the evidence and the scientific data we've uncovered...

You can make up your own mind on whether you think we're slowly being poisoned in the name of power and profits... or not.

As for me, I've already begun taking the steps I'm about to show you to better my life.

Hi, my name is Doug Hill.

I live in northern VA with my wife and four children -- two boys, two girls... all in their late teens and early 20s.

And I know all this sounds pretty daunting, but believe me... I have no interest in trying to scare you.

As the director of an independent research group called the Laissez Faire Club, it's my duty to sound the alarm bell loud and clear.

My team is on an important mission to show folks how to live happier lives with greater freedom, health, and prosperity... no matter what Obama, the government and their accomplices in Washington do.

We've already exposed investment secrets from Wall Street insiders... health secrets Big Pharma hopes you never discover... tax secrets the IRS doesn't want you to know... and more.

And now we're blowing the whistle on the food industry.

For example... did you know that according to a study from the Harvard medical School, some types of milk could cause as much damage to your health as smoking 4 packs of cigarettes a day?

Think about that...

Smoking four packs a day is almost certain to lead to an early death. It's ridiculous. And it's something even the most aggressive chain smokers don't do.

Yet, I'd bet not one in 1,000 people know that a specific type of milk may be just as harmful to your health.

And there's a good chance this milk may be in your fridge right now. It was in mine, too. Until I came across the research you're about to see.

In just a moment, I'll show you the specific four-letter word you need to look for on your milk jugs. And if you're drinking milk with this word on the label, I urge you to stop immediately.

Here's a Different Way to Think About It...

Cigarettes became really popular in America in the early 20th century, between 1910 and 1920. And the negative health effects of tobacco were not initially known.

For decades, lots of scientists and government agencies told us tobacco was safe.

In 1944, for example, the American Cancer Society said that “no definite evidence exists” between smoking and lung cancer.

It wasn't until 1967 that a Surgeon General's Report concluded that smoking is the principal cause of lung cancer, and found evidence linking smoking to heart disease.

In other words, it took more than four decades for the population to realize tobacco was dangerous.

During all those years, the tobacco industry publicly denied that smoking causes cancer.

But the truth is that the big tobacco companies knew it all along that its products could cause cancer... and they lied just to protect their profits.

Can you imagine how many people died because they believed in the tobacco industry?

There's something similar going on today... but now this new, critical danger is hidden within our food...

And here's the really sad thing...

I'd guess more than 99% of Americans are putting themselves at risk simply because they don't know the truth about our food supply.

They don't know we're eating foods far away from what nature made. They don't know these modified foods could be causing cancerous tumors that silently grow within them.

But you and your family don't have to be victims. In the next few minutes, I'll give you simple food solutions that will put you and the people you care about on the way to abundant health.

For example, I'll tell you details about...

- ✓ The one thing that could be silently killing you... and 10 natural ways to fight it.
- ✓ 10 foods you should NEVER eat. They're banned in other countries, but I bet you'll find at least one of them in your fridge right now.
- ✓ 28 “super foods” that can help you prevent chronic illnesses.
- ✓ 5 “poisons” that are used as food additives in several items at your grocery store.
- ✓ And dozens of other tips and tricks that could help you live a longer, healthier life.

And here's the best part... the solutions I'll present here are affordable and easy to implement.

That means you don't have to worry about forking over \$1,000s a year to switch to foods with fancy organic labels.

With these secrets, you'll be able to eat all your favorite food, without falling into the many traps of our dangerous food system.

I'll even show you how to get healthy, mouthwatering food for just pennies on the dollar.

But I'm getting ahead of myself a bit.

Before I get into these solutions, I think it's important you understand the true scale of the problem. So, let me ask you...

Have You Noticed We're Getting Sicker than Ever Before?

Americans get sick more often than Europeans and people in other industrialized countries.

And since the mid-1990s, the number of Americans suffering from chronic diseases, such as heart disease, asthma, cancer and diabetes, has nearly doubled.

America's infant mortality has increased and life span has plunged.

Why is this happening? What has changed over the last two decades that could possibly explain this huge downward spiral in the health of our nation?

Well, one thing definitely changed in the mid-1990s: the food we eat.

A little over twenty years ago, scientists started tinkering with our food supply, taking genes from one species and forcing it into the DNA of other species...

Creating new organisms that did not exist in nature... organisms that are now part of the majority of the food we eat.

I'm talking about crops that have been genetically engineered to either produce their own pesticides or withstand mega doses of herbicides.

They came with the promise they would increase crop yields and profits. So, many in the farm community welcomed this innovation.

As a result, starting in 1996, these **genetically modified organisms, or GMOs**, spread rapidly through U.S. fields.

This was also a big bonanza for the biotech firms that *developed* these crops.

You see, genetically engineered seeds are patentable. So the companies that develop these seeds can have total control of the market. This represents billions in sales.

For example, take a look at a company named Monsanto. With a 90% market share, it dominates the GMO industry.

And farmers who purchase Monsanto's patented GMO seeds have to sign a contract. This agreement forbids farmers from keeping any new seed produced by the crop for the following year, or even saving leftover seeds.

In other words, farmers must agree to use the seeds for one-time only. This basically ensures a perpetual stream of cash flow for the company because farmers will have to buy new seeds every year.

It was a win-win situation for the farmers and biotech firms. The farmers get bigger crops that can grow in any conditions. The biotech firms make money selling their seeds.

And boy, did it produce profits...

Take a look at this chart of Monsanto's share price over the past 15 years...

MONSANTO'S SHARE PRICE

My point is this...

A lot of people got very rich, and very powerful selling these genetically modified crops. There's a lot of money at stake here.

But here's the scary thing...

According to new scientific evidence, these genetically modified crops may be extremely dangerous to our families.

And just like people used to smoke cigarettes because they had no idea it could kill them, most Americans today are eating this food because they are unaware of the risks.

They do it because government agencies, such as the Food and Drug Administration (or FDA), have said these genetically modified crops are safe.

But can we trust them?

Well, as you will see in this presentation, the FDA has actually never conducted any studies on humans to prove this food is safe.

In other words, this government agency has intentionally unleashed a host of potentially harmful foods onto American dinner tables.

I know this may be hard to believe...

But 44,000 pages of internal memos from the FDA show its own scientists agreed that GMOs could create unpredictable, unsafe, and hard-to-detect allergens, toxins, diseases, and nutritional problems.

In a moment, I'll reveal all the details of these disturbing memos – including details from a little known document marked as "CONFIDENTIAL Read and Destroy" by one of the biggest GMO firms.

Believe me, this is the smoking gun they hoped we'd never find. You'll see the details, and be able to make up your own mind on whether I'm right or wrong.

And then I'll tell you exactly what kind of foods you should avoid, including the four-letter word you need to look out for on your milk cartons.

I've already went through my own fridge and pantry to protect my wife and four kids. I suggest you do the same.

But before we get to those things you need to look out for, let me tell you about...

The Secret Killer in Your Food

Did you know that about 80% of your immune system resides in your gut?

And, of course, the gut is the main interface between our body and any kind of food.

So, if for any reason, your body sees food as an alien object, something that cannot be found in nature...

Your immune system might attack it, creating an inflammatory reaction. In other words, inflammation flares up whenever your body feels threatened.

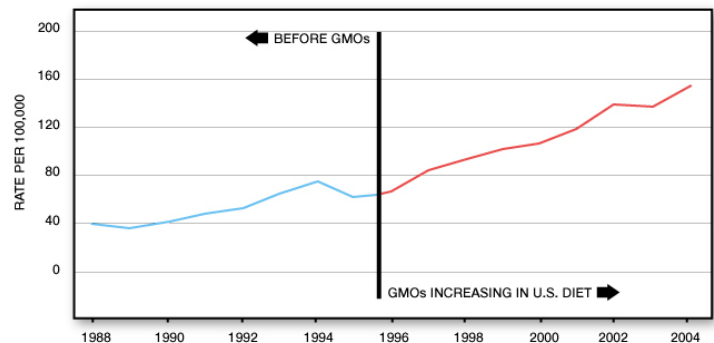

Well, it turns out.... Since 1996, when GM foods were introduced into our diet, several digestive disorders related to gut inflammation have skyrocketed. Take a look...

Is this just a coincidence? Well, think about this for a moment...

Scientists have changed the gene sequence of some of the food we eat, making it a foreign object... So it shouldn't be a surprise that our immune system might be reacting to this new kind of food, causing inflammation.

And that's a big deal because the health damages can go well beyond diseases related to digestion.

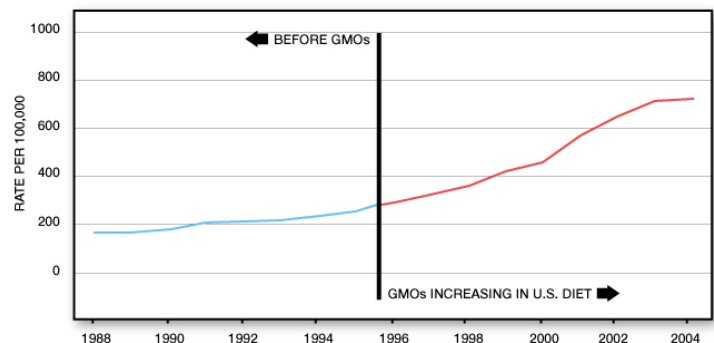

CHRONIC CONSTIPATION
1988 – 2004

GASTROINTESTINAL INFECTIONS
1988 – 2004

GASTROESOPHAGEAL REFLUX
1988 – 2004

You see, inflammation has been linked to a number of health problems.

In fact, recent medical research shows that hidden inflammation, the kind that originates in your gut, is at the root of ALL chronic illness we experience - conditions like heart disease, obesity, diabetes, dementia, depression, cancer, and even autism.

Maybe that explains why autism has increased 600% since GM foods came on the market... or why the number of Americans with diabetes has nearly tripled in the past two decades...

That's why TIME magazine has called inflammation "the secret killer". According to the magazine,

"It destabilizes cholesterol deposits in the coronary arteries, leading to **heart attacks and potentially even strokes.**"

"**It chews up nerve cells in the brains** of Alzheimer's victims. It may even foster the proliferation of abnormal cells and **facilitate their transformation into cancer.**"

"In other words, chronic inflammation may be the engine that drives many of the most feared illnesses of middle and old age."

For me, it was shocking to find out that the food my family was eating... the food I fed my two boys and girls when they were growing up could cause inflammation and lead to all these deadly diseases.

But the science is clear.

Inflammation happens for a reason... it happens when a bacterium or toxin or some other irritant triggers an immune response.

And several studies have shown that genetically modified food is triggering that response.

For example, Dr. P. M. Bhargava, one of the world's top biologists, has reviewed 600 scientific journals. He concluded that GM foods in the US are largely responsible for the increase in many serious diseases.

And Dr. Robin Bernhoft, a Harvard-trained doctor and director of the Bernhoft Center for Advanced Medicine in Ojai, California, has found that patient health improves when GM foods are removed from their diet.

Dr. Miguel Gonzalez, a physician in California, believes that “genetically modified foods are causing inflammation of the bowel.”

And research from the American Academy of Environmental Medicine states that

“Several animal studies indicate serious health risks associated with GM food consumption including infertility, immune dysfunction, accelerated aging, dysfunction of cholesterol synthesis, insulin regulation, and protein formation, and changes in the liver, kidney, spleen and gastrointestinal system.”

As you can see, many scientists believe that GM food is what’s triggering inflammation.

And if you don’t address that properly, you may end up with coronary artery disease, arthritis, cancer and other chronic illnesses.

In a moment, I’ll show you ten natural ways to reduce inflammation in your body. I’ll even give you the name of some foods that not only fight inflammation, but can also protect you against arthritis and diabetes.

But first, let me warn you...

The list of foods that can potentially be dangerous to your health is much longer than you can probably imagine.

Whether you realize it or not, there’s a good chance you’re eating genetically modified foods every day.

For example... let’s look at milk, the traditional symbol of purity and nutrition.

Did you Know You Could Get Cancer... Just from Drinking Milk?

For the past 20 years, much of the nation’s milk has come from cows injected with a genetically engineered growth hormone known as rBST.

Write those letters down...

r-B-S-T.

After we’re done here today, you should go to your fridge and look at the milk you have. Make sure your milk is rBST-free.

Again, it's...

r-B-S-T.

But before you go check, let me explain how dangerous those letters can be...

Farmers inject rBST into cows every two weeks to increase hormonal activity, boosting milk production by as much as 25%.

That's great for dairy producers, who are able to get more milk from each cow, increasing their profits. It's also great for the biotech companies that sell the hormone.

There's only one big problem: this hormone has been linked to various types of cancer.

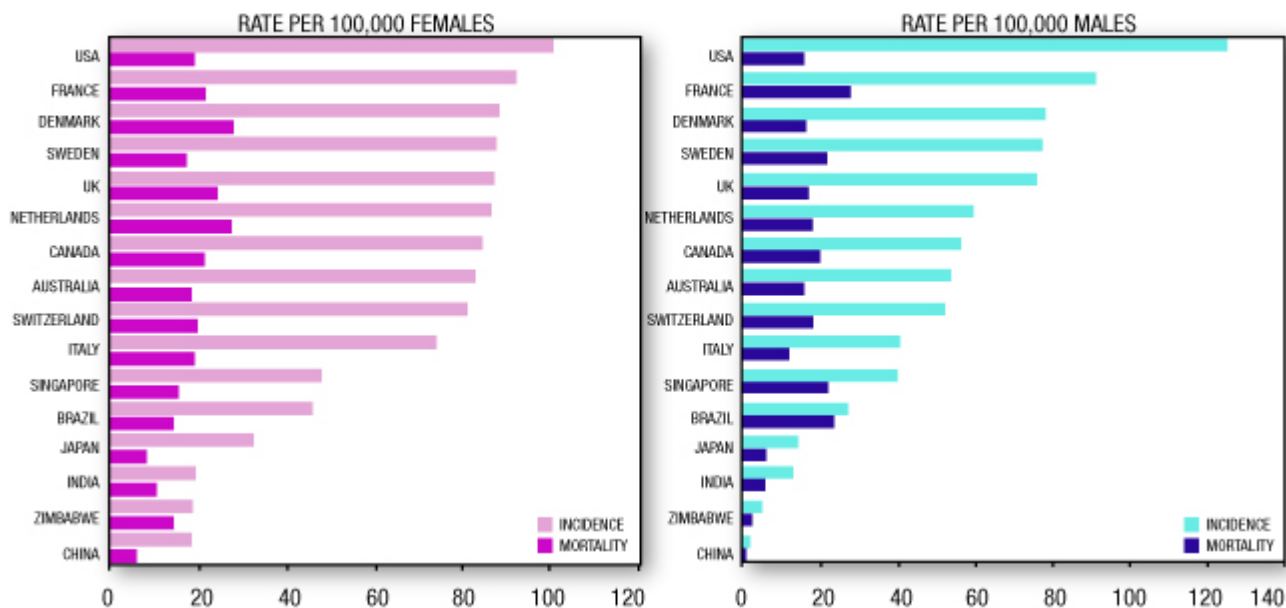

That probably explains why all 27 countries of the European Union, Canada, Japan, New Zealand, Australia, and Canada have all banned its use in milk destined for human consumption.

Sadly, the U.S. is the only developed nation that allows rBST.

The Cancer Prevention Coalition has even submitted several petitions to the FDA asking them to ban this hormone.

But the FDA has ignored their requests. Maybe that explains why the U.S. has the highest rates of cancer in the world.

HIGHEST RATES OF CANCER IN THE WORLD

A study done by Susan Hackinson, ScD, of Harvard Medical School, has showed that this hormone increases the risk of developing breast cancer seven-fold in women under 50... and that it increases a man's risk of developing prostate cancer nine-fold.

Dr. Jenny Pompilio, a physician with Kaiser Permanente in Oregon says: “It’s been known for years that this particular hormone is linked with cancers [because of its] effects on the endocrine system.”

Now, if you’re like me, you’re probably asking yourself: “how in the hell has the FDA approved this?”

You would think that, after approving it, the FDA would at least slap a label on rBST milk saying something like “warning: could cause cancer.”

But that’s not what happened.

Dairies that use this dangerous hormone don’t even have to disclose that information to consumers.

And the FDA didn’t stop at forbidding GM labeling... It went one step further.

In 1994 they wrote a regulation requiring that any food label describing the product as bovine growth hormone free must also include these words:

“The FDA has determined no significant difference has been shown between milk derived from rBST and non rBST treated cows”

So, the FDA basically restricted dairies that didn’t use the hormone from pointing out that their milk was different from the genetically modified kind.

Maybe you’ve seen this statement on your jug of milk. And since it comes from the FDA, I bet you believed in it... like I did.

But did you know that this rBST statement has never been verified by either Monsanto or FDA studies? If a private company had made such statement, it would be charged with fraud.

And it gets worse... the FDA consistently covered up warnings from its own scientists about the health hazards of GMOs.

The details are buried inside 44,000 pages of FDA’s internal files. I’ll reveal the content of these documents in a moment.

First, it’s important that you understand that the approval of rBST reveals...

**One of the Biggest Government Lies:
“The Food We Eat is Safe”**

You see, the FDA didn't perform any kind of testing in regards to rBST. FDA official John Scheid later admitted to the Associated Press that the agency based their approval simply on a summary provided by Monsanto.

Former FDA veterinarian Richard Burroughs, who was a lead reviewer in this hormone's approval process, said the drug "was approved prematurely without adequate information"... and that "the whole rBST thing was bad science and bad regulation."

The European Union even investigated the FDA's faulty approval process and concluded that the hormone's safety had never been proved.

Canadian scientists also analyzed the FDA's approval process and wrote a lengthy and scathing report. If you google "Gaps Analysis Report", you can read it online.

The report recounted omissions, contradictions, weaknesses, and gaps in the FDA's approval process. It concluded that...

"The required long-term studies to ascertain human safety were NOT conducted. Hence, the risk of sterility, infertility, birth defects, cancer and immunological disorder was not addressed."

Are you starting to see how dangerous this food scandal is?

Thanks to the FDA, you may have unknowingly drunk countless glasses of a dangerous substance... or poured it into bowls of cereal for your children and grandchildren.

And, to this date, the agency continues to allow milk from cows treated with rBST.

Unless it's labeled organic or "rBST free", everything in the dairy section of your grocery store, including yogurt and cheese, probably includes milk from cows injected with this hormone.

Unfortunately, milk is just the tip of the iceberg.

With the help of the FDA, GMOs have spread throughout our food supply. It's virtually everywhere.

The obvious question is... why would the FDA put Americans at risk?

Well, it turns out the Deputy Commissioner for Policy at the FDA in 1993 had strong links to Monsanto. He had worked for the company, before joining the FDA.

In fact, after helping secure the approval of rBST, he went back to Monsanto to work as its Vice President for public policy.

Today, he's once again at the FDA, working closely with the Obama administration on food safety.

You can't make this stuff up.

And over the past two decades, the FDA has been doing everything it can to keep us in the dark... to keep us from finding out how dangerous GM foods really are.

As a result...

We've All Become Unwitting Guinea Pigs In An Experiment of Massive Proportions

Take soybeans, for example.

Scientists took genes from bacteria and inserted into the DNA of soy, creating a new kind of crop that can withstand mega doses of an herbicide called Roundup.

They call it Roundup-ready soy... and it accounts for 94% of soybeans in the U.S.

So, farmers can spray these crops as often as they like. The herbicide will kill all weeds, but leave the soy plants intact.

This is great because the farmers who buy Roundup-ready soy also have to buy Roundup, which is the company's best-selling herbicide.

As you can probably imagine, this scheme is very lucrative for biotech companies.

The only problem is that new studies show that GM soy can be dangerous to your health.

You might say "but I don't eat a lot of soy products, so what's the big deal?"

Well, did you know soy is in a thousand places we might never expect it, usually in the form of "vegetable oil"? You'll find it in salad dressings, soups, and imitation meat products.

In fact, if you or anyone in your family eats any kind of processed food, such as cereals, cookies, cakes, chips, crackers, muffins, mac n' cheese, chicken nuggets, it's very likely you're eating genetically modified soy.

And numerous studies with animals have showed that...

It Can Cause Damage in the Liver, Lung, and Pancreas

UK scientists at the York Nutritional Laboratory have linked GM soy to digestion problems, headache, lethargy, acne, and eczema. And they sounded the alarm saying that their findings "provide real evidence that GM food could have a tangible, harmful impact on the human body."

And a human study from the U.S. National Academy of Sciences said that parts of the altered gene in GM soy went on to live in our gut. The study concluded this has the potential to change our immune system in unpredictable ways.

Dr. John Boyles, an allergy specialist from Ohio, says “GM soy is so dangerous that I tell people never to eat it.”

Even babies are at risk...

Because soy is used in 25% of all baby formulas in the US. Dr. Daniel Sheehan, a toxicologist formerly with the FDA, has warned that infants who drink this formula are part of a “large, uncontrolled and basically unmonitored human infant experiment.”

So, how can you get around this problem?

Well, one easy step you can take is to avoid processed or packaged foods.

You see, aside from soybeans, in the U.S., 90% of sugar beets and 88% of corn are also genetically modified.

These items are basic components of pretty much everything you can find in a grocery store. So, every time you or your family eat processed or packaged food, there’s a good chance you’re taking a bite of a GM ingredient.

And that’s just one simple solution. In a moment, I’ll show you more than a dozen food secrets that will help you avoid GM food and improve your life.

As I mentioned earlier, I can’t guarantee they will make you live to 100 years old. But I can promise that you’ll be greatly better off than those who continue to eat potentially dangerous food.

First, let me show you why...

You Could Be Eating a Dangerous Toxin Every Day

Just like soy, corn also seems to be everywhere. High-fructose corn syrup lurks in foods that don’t seem “corny” to us: candy, breads, ketchup, granola bars, and even English muffins.

While soy has been genetically modified to withstand herbicides, corn has been genetically modified to produce its own insecticide.

Scientists took genes from a bacterium that produces an insecticide and inserted it into corn. With that new genetic material, the corn can produce its own bacterial toxins, called Bt protein.

It’s a toxin that’s design to break open the stomach of insects that try to eat the corn. So, the corn’s cells produce a toxic protein that kills bugs.

The crop itself is the pesticide.

When I discovered this information, the first thing that came to my mind was...

“Wait a second... if this toxin destroys the insect’s gut, could it do the same to me and my family?”

According to the FDA, this corn is safe. They say Bt protein is toxic only to insects. But there’s new evidence that shows Bt protein could damage humans as well.

A recent study published in the International Journal of Biological Sciences concluded that GM corn damages the liver and kidneys.

The Journal of Hematology Diseases published research showing that it destroys red blood cells, disrupt blood clotting and cause organ degeneration and tissue damage in mice.

Joe Cummins, Professor Emeritus of Genetics at the University of Western Ontario, has also concluded that the Bt toxin could damage the small intestine.

And UK’s Institute of Science in Society has said that Bt “kills human kidney cells” and that its approval was based on “inadequate safety assessments.”

No wonder genetically modified corn is already outlawed in Hungary, Austria, Germany, Greece, and Luxembourg.

But Americans are unknowingly consuming this Bt toxin every single time they eat something that has GM corn in it.

Just look at these rats... they were fed genetically modified corn... the same corn you buy from the grocery store... and feed your family.

In this particular study, GM corn caused rats to develop horrifying tumors, widespread organ damage, and premature death.

Rats that ate GM corn saw four times the number of deaths and an 80% increase in cancer compared to those that ate conventional corn.

Despite all this shocking evidence, agricultural companies and the FDA continue to claim that GM corn is safe because, according to them, our body naturally degrades the Bt toxin.

If that’s true, then how can you explain the fact that toxic pesticides from GM food crops have been found in unborn babies?

In a study that analyzed dozens of samples from women, scientists found traces of the toxin in 93% of the pregnant mothers and in 80% of the umbilical cords.

The research suggested the chemicals were entering the body through eating meat, milk and eggs from farm livestock that were fed GM corn.

And UK's The Telegraph reported that the study's conclusion "appears to contradict the food industry's long-standing claim that any potentially harmful chemicals added to crops would pass safely through the body."

If you have kids in your family, I'm sure you know exactly how I felt when I discovered all this shocking information...

Because, perhaps, the most disturbing fact about our food supply is that....

Our Little Ones Are At Risk

Are your children or grandchildren suffering from chronic ear infections, coughs, runny noses and headaches? Eczema and itchy skin? Or frequent sleepiness, crankiness, or sickness?

If they suffer from symptoms like these, maybe their immune system is overreacting to the hormones in that apparently healthy glass of milk...

Or that soy protein that's virtually in every processed food... or to the high-fructose corn syrup that sweetens everything from sugar-free cereals to whole wheat bread.

You see, kids are much more sensitive to toxins. So, they're very vulnerable to GM food.

Perhaps that explains why, in the last twenty years, the incidence of childhood ailments like food allergies, asthma, ADHD and autism have increased dramatically in the U.S.

During our research, we came across the opinion of a pediatrician who has been treating children for over 30 years. She has also been named one of "America's Top Pediatricians" by the Consumer's Research Council of America.

She says that over the last decade she has seen a huge jump in the number of children with chronic diseases—digestive issues, profound food allergies, increased immunological disorders, inflammatory bowel disease, and more.

She believes GM food is behind this epidemic. And according to her,

“We are a Living Science Experiment.”

Take food allergies for example...

Think back to when you were younger.

How many of your friends had peanut allergies?

Did your brother or sisters have to carry around an Epi-Pen? Did they have to be ready to shoot their bodies full of adrenaline if they ate something wrong?

When I was growing up, food allergies were extremely rare. In fact, I don't remember having *any* childhood friends who were allergic to nuts.

But today, we can't even send our children to school with a peanut butter and jelly sandwich...

Because, chances are, a kid in their class is deadly allergic to peanuts... or one of the other new allergies that are popping up like crazy.

And it's not just our anecdotal proof we have. Science now verifies that something has gone horribly wrong with our food supply.

Dr. Jacqueline Pongracic, head of the allergy department at Children's Memorial Hospital in Chicago, says:

"I've been treating children in the field of allergy immunology for 15 years, and in recent years I've really seen the rates of food allergy skyrocket. More than half of the children I care for have a food allergy."

According to the American College of Allergy, Asthma & Immunology, food allergies affect more than six million children in America. That's twice the number of cases recorded in 2007.

So again... what's gone wrong?

Well, after months of research, I believe it all comes back to this genetically modified food we're putting into our bodies.

Peanut allergy alone kills hundreds of American kids each year. And its incidence has increased 10-fold since 1997, the year GM soy was introduced into the market place.

According to the Center for Disease Control, the number of hospitalizations related to food allergies has also increased 265% in the decade following the introduction of GM food.

And a study published in the Journal of Allergy and Clinical Immunology concluded that genetically modified peanuts and soybeans can trigger allergic reactions in human body.

In other words, all these studies suggest that, in many occasions, our kids' immune system perceives GM food as a threat, which leads to allergies.

They suggest the consumption of GM food explains the current food allergy epidemic.

In a minute, I'll show you which foods are safe for your children and grandchildren... and which ones you should avoid, including 3 popular kids' food you should NEVER feed your little ones.

But first, there's something I need to address...

After all the shocking evidence I've showed you here, I'm sure by now you're asking...

“Why Isn’t This Being Shouted From The Rooftops??”

Well, once you understand the strong link between government and big corporations that produce GM food, the answer is not exactly a surprise.

But that doesn’t make it any less disturbing.

Big corporations, lobbyists and politicians will do anything to keep you in the dark. Why? Because there’s big money involved. That’s the cold truth of our food supply.

If word gets out that genetically modified foods are potentially dangerous, the food companies’ billions of dollars in profits will be in SERIOUS jeopardy.

The genetically modified crop market is huge. In the last decade alone, Monsanto, which controls 90% of the market, has made more than \$116 billion in sales.

And they use a lot of that money to make sure nobody will interfere with their business.

For example, in recent years they have spent over \$52 million in lobbying to make sure they get the most favorable legislation possible.

And that has paid off... as the New York Times said, “the White House worked behind the scenes to help Monsanto get the regulations that it wanted.”

The company is also a very prolific user of Washington DC’s “revolving door.”

The FDA, for example, welcomes past and future executives from the food industry.

In other words, giant corporations literally send employees to go work for the FDA and other regulatory agencies, where they can write food policies that will favor the companies.

To this date, the current Deputy Commissioner for Policy at the FDA is a former Monsanto employee.

As a key regulator in charge of food safety, he has the ability to control what does and doesn’t show up on your family’s table.

Don’t you think that having someone from one of these corporations in charge of food policies represents a huge conflict of interest?

Thanks to these intimate links with government agencies, food corporations could be...

Using You and Your Family as Lab Rats

In 1992, when the FDA approved GMOs, the agency claimed there was an overall consensus among scientists that GM food was safe.

But now we know that's a big lie.

In 1998 a lawsuit forced 44,000 pages of internal files from the FDA into the public domain.

These memos reveal that the consensus was the exact opposite. Scientists urged the FDA to do long-term safety studies to guard against possible allergies, toxins, new diseases, and nutritional problems.

For example, FDA scientists recommended testing every GM food "before it enters the marketplace" because of "the possibility of unexpected, accidental changes in genetically engineered plants."

According to one of the memos, Dr. Linda Kahl, an FDA compliance officer, warned the agency that "the processes of genetic engineering lead...to different risks."

And Dr. Jim Maryanski, the FDA Biotechnology Coordinator at the time, admitted that there was no consensus about the safety of genetically engineered foods in the scientific community.

But bureaucrats at the FDA ignored the scientists' warnings and allowed GM food crops onto the market.

Dr. Maryanski also admitted that the approval of GMOs was based on politics, not science. He said that "the determination whether a new protein is safe can be made by the company."

In other words, the FDA- the agency so many naïve Americans think is here to protect us- allowed food companies to determine the safety of GM food.

But one of Monsanto's own executives said at the time that "Monsanto should NOT have to vouch the safety of biotech food. Our interest is in selling as much of it as possible."

Dr. Philip Regal, a professor at the University of Minnesota and an internationally recognized plant expert once stated: "Over the last fifteen years, I and other scientists have put the FDA on notice about the potential dangers of genetically engineered foods."

According to Andrew Kimbrell, who at the time was Executive Director of the International Center for Technology Assessment, "by failing to require testing and labeling of genetically engineered foods, the FDA has made consumers unknowing guinea pigs for potentially harmful food substances."

And a report by eight renowned international experts concluded that "agricultural GM companies and evaluation committees systematically overlook the side effects of GMOs and pesticides."

The study also says they greatly underestimate "the initial signs of diseases like cancer and diseases of the hormonal, immune, nervous and reproductive systems, among others."

And it gets worse... the food industry's control goes well beyond the government. So let me show you exactly how...

It Keeps the American Public in the Dark

Big food companies provide funding to most food research, conferences, and fellowships.

This private funding certainly seems to affect the way professors and scientists think, act, and publish.

Researchers have a huge incentive to write only good things about GM crops, otherwise they may lose funding... or even worse, their jobs.

A study from Food and Water Watch concluded that this corporate funding “taints the independence and objectivity of agricultural research.”

These companies have also been systematically blocking researchers from using its patented gene modified seeds.

According to Doug Sherman of the Union of Concerned Scientists, “multibillion-dollar agricultural corporations, including Monsanto and Syngenta, have often refused to provide independent scientists with seeds, or they’ve set restrictive conditions that severely limit research options.”

26 researchers from different universities even wrote a letter to the Environmental Protection Agency protesting restricted access to seeds. The letter states that “no truly independent research can be legally conducted on many critical questions involving these crops. The biotech industry is completely driving the bus.”

The magazine Scientific American has also reported that “only studies that the seed companies have approved ever see the light of a peer-reviewed journal. In a number of cases, experiments that had the implicit go-ahead from the seed company were later blocked from publication because the results were not good.”

In other words, these companies basically choose who gets to do research and what topics are studied and published.

They also try to destroy the reputation and careers of any scientists who stand in their way.

Perhaps, biologist Arpad Pusztai is the best example. He had more than 300 articles and 12 books to his credit and was the world’s top expert in his field.

In the 1990s, he conducted a study that showed that rats that ate GM potatoes developed potentially pre-cancerous cell growth, smaller brains and testicles, partially atrophied livers, and damaged immune systems.

After his shocking discovery, he decided to reveal his findings on national TV.

Two days later he was fired and silenced with threats of a lawsuit. His team was dismantled. And the government, with the help of big corporations, launched a smear campaign to destroy his reputation.

Many other scientists have been threatened and fired from their jobs as well.

That's why University of California at Berkeley professor Ignacio Chapela says that "it's very hard for us to publish in this field. People are scared."

That's a big reason why most Americans have no idea how dangerous GM foods are.

We Don't Even Have the Right to Know What's In Our Food

For years, polls have shown that about **93% of Americans support the labeling of foods that contain genetically modified organisms.**

But the biotech industry, with the help of the FDA, has decided that we don't need to know when there are potentially harmful ingredients in our food. So, GM foods are not required to carry identifying labels.

We are being denied the fundamental right to know what's in our food - a right that more than 50 other nations, including China and Russia, offer their citizens.

It's estimated that 70% of processed foods contains genetically modified organisms. But because of the lack of labels, Americans have no clue.

By keeping us completely in the dark, these GMO companies are essentially controlling our diet.

As a result, millions of American infants, children and adults are unknowingly consuming potentially dangerous food products each day. But...

You and Your Family Don't Have to Be Victims

There're a surprising number of simple things you can do to avoid the dangers of our corrupt food system.

And, after hundreds of hours of research, my staff compiled the best of the best ACTIONABLE solutions into a book called **Non-GMO Guide: Food Secrets for a Long and Healthy Life.**

You see, I'm the director of a fast-growing organization called the Laissez Faire Letter.

Laissez Faire is a French term. It simply means "let it be," or "leave it alone."

As in...

Leave our food alone as nature intended it.

Leave our banking and financial systems alone so they're not manipulated.

Leave our computers alone and don't spy on us.

And generally to leave us alone to live free lives where we're able to make our own choices.

Our latest mission is publishing the just released version of **Non-GMO Guide: Food Secrets for a Long and Healthy Life**.

But here's the thing...

This specific book isn't for sale.

Not anywhere in the world. And not for any price.

But I believe the truth about the dangers of our food supply is so important that I've made this information available to you.

So, today, through this message only, I would like to send you this lifesaving information at no cost whatsoever.

That's right... **this book is completely FREE, as my gift to you. You won't even pay shipping and handling.**

In a moment, I'll explain how to claim your copy at my expense...

But first, I want to show you a few steps you should start taking right away.

Remember... the longer you eat these dangerous foods, the higher the risk they could damage your health.

And the good thing is...these moves are easy and fairly straightforward to implement.

So here are the specific steps you should take...

Step #1: Never Eat These 10 Foods

As I showed you in this presentation, there are dangers lurking at every single corner at your grocery store.

In fact, some of these foods are so dangerous that they have been banned in other countries.

I already told you about milk from cows treated with rBST, a hormone that has been linked to cancer.

It has been banned in more than 30 countries. But it's legal in the U.S.

And remember, dairy products, like cheese and yogurt, can also come from cows injected with this dangerous bovine growth hormone.

So, if your milk is not labeled “Organic”, or “Non-GMO Project Verified”, you should look for labels stating “No rBST or artificial hormones.”

But rBST milk is just the tip of the iceberg. I’ve compiled a list of 10 foods you should never eat. You’ll find all the details in chapter 4 of your free book **Non-GMO Guide: Food Secrets for a Long and Healthy Life**.

For example, I’ll tell you about:

- ✓ A dangerous chemical that has already “poisoned” 1,700 people. For that reason, it’s banned in 160 countries. But you’ll find it in some types of meats in the US.
- ✓ A synthetic chemical that can cause skin rashes, acne, loss of appetite, fatigue, and cardiac arrhythmias. It’s banned in Europe and Japan, but in the US you’ll find it in several popular drinks sold at your grocery store.
- ✓ Three popular kids’ foods to never feed your children and grandchildren. They contain substances that have been linked to cancer and behavioral problems.
- ✓ A chemical that has been linked to kidney and nervous system damage, thyroid problems, and cancer. It’s banned in Canada, China and the European Union... but in the US it’s a hidden ingredient in some types of breads.
- ✓ A substance that has been banned in the UK and Canada...but it’s in many fat-free products in the US. It’s so dangerous that Time magazine called it one of the worst 50 inventions ever.
- ✓ The one fruit that’s banned across the European Union, but legal in the US. It could be in your fridge right now, waiting for you to take the next bite.
- ✓ A dangerous type of fish that can potentially damage your eyesight. It’s banned in Australia and New Zealand, but very popular in the U.S.
- ✓ And much, much more.

And that’s just one chapter. The book is full of food secrets like these... secrets that could help you live a healthier, longer life, regardless of what the FDA is doing.

In a moment, I will show you how to claim your FREE book. First, I want to move on to another solution that's easy for you to implement...

Step #2: Avoid These Five “Poisons” Approved by the FDA

As you can probably tell by now, the FDA has failed terribly at protecting consumers from dangerous foods.

Even the own agency admitted that it “does not have the capacity to ensure the safety of food for the nation.” And many FDA employees have stated that the agency actively harms public health in order to protect corporate interests.

In the most recent scandal, the FDA has admitted that chicken meat sold in the USA contains arsenic, a cancer-causing toxic chemical that's fatal in high doses.

So, GMOs are not the only problems in our food supply.

The truth is the FDA permits the use of several chemicals that have been linked to cancer, heart disease and other health problems.

For example, sodium nitrate is a chemical that's added to food to help preserve it. You will find it in processed meats such as bacon, ham, corned beef, hot dogs, and much more.

But it's a toxin that can be damaging to your health.

According to the American Medical Association, a diet high in sodium nitrites may lead to fatal respiratory problems, and gastrointestinal and brain cancer.

So, make sure you restrict your intake of foods that carry this toxin.

But that's not the only dangerous chemical the FDA has allowed to creep into our food.

Besides sodium nitrate, I've identified four other dangerous secret ingredients you should watch out for. Make sure they don't make it into your grocery cart.

You'll find all the details in chapter 5 of your personal copy of **Non-GMO Guide: Food Secrets for a Long and Healthy Life**. I'll tell you about:

- ✓ An ingredient that's used in food as a flavor enhancer... but that has been strongly linked to nerve damage, brain cancer, and obesity. It's very common in soups, salad dressings and chips.
- ✓ A substance that has been added to food to increase shelf life... but that could lead to high blood pressure and diabetes. Simply cut this from your diet, and your heart may tick away reliably for decades to come.

- ✓ Two artificial sweeteners that could cause optic nerve damage, brain damage, and increase your chances of getting lymphoma. Make sure you never use them.
- ✓ And much more...

As you can see, there are a lot of scary things lurking in our food supply.

But with this list, all you have to do is check the ingredient labels on the foods you buy and make sure they don't have these dangerous substances.

Simply avoiding these 5 ingredients could help protect you and your loved ones from diseases such as cancer, heart disease, obesity, and diabetes.

All this information will be yours, free of charge, once you claim your book. I'll tell you how to do that in a minute. First, there's another step you should take...

Step #3: Use These 10 Natural Ways to Reduce Inflammation

As I showed you in this presentation, inflammation has been linked to coronary artery disease, arthritis, cancer and other chronic illnesses.

So I've dedicated a chapter in the book to show you simple ways to reduce inflammation in your body, without the side-effects that come with drugs.

For example, did you know that whole grains, as opposed to white bread, cereal, rice, and pasta, can help keep harmful inflammation under control?

But it's not just any product labeled "whole grain." In order to get the benefits, the food must list whole grain as the first ingredient, and cannot have added sugars.

In the book, you'll also discover...

- ✓ A natural substance that minimizes chronic inflammation and helps curb stiffness and joint pain. Add this to your diet, and you may finally be able to move with the grace and freedom of youth. It's also affordable and available at your local pharmacy.
- ✓ How to brew, at the comfort of your home, a tea that could reduce inflammation and add years to your lifespan. This anti-aging drink is popular in Okinawa, a Japanese island with the world's longest average life span.

- ✓ A natural supplement that will not only supercharge your immune system, but also increase your daily energy up to 10%. This could even make you feel 10 years younger.
- ✓ A unique enzyme that breaks down the byproducts of inflammation, promoting cellular repair.
- ✓ Five foods that, when consumed in excess, can lead to chronic inflammation.
- ✓ A “cleansing” liquid that flushes out toxins and reduces inflammation in your body.
- ✓ 28 “superfoods” that are anti-inflammatory. Just start adding a few of these nutritional powerhouses to your daily diet, and you may be able to stay out of the doctor’s office for good!

All this information will help you live a GMO-Free life. And with all the food secrets we reveal in this book, you’ll be able to...

Opt Out of This Experiment And Take Back Your Health

So far, I’ve showed you evidences from world renowned scientists, veterinarians, physicians, farmers and even former policy makers.

Together, they make one heck of a convincing case against genetically modified foods and the biotech invasion into the food industry.

But despite all the evidence and the growing concerns of genetically engineered crops, government officials continue to rubber stamp their approval.

In other words, you shouldn’t expect anyone in the government to ensure the safety of your food...

Because our food supply is under control of cronies... giant food corporations that dominate food and farm policy at the White House, USDA, FDA, and EPA.

And all they care about is making money. They don’t give a damn about your health.

That’s why I would like to send you a FREE copy of the book **Non-GMO Guide: Food Secrets for a Long and Healthy Life**.

In this book, we will show you everything you need to know to take back your health simply by making smarter choices about your food.

No hidden allergens, no cancer-causing hormones, no weird-science DNA. Just good, healthy food.

For example, I'll tell you about...

- ✓ The worst thing you can possibly buy at the grocery store. Most people think it's healthy. But unless you buy organic, there's a 99% chance it's contaminated with pesticides... toxins that have been linked to birth defects, nerve damage, cancer, Parkinsons' disease, autism, and diabetes.
- ✓ 66 brands of cereals and breakfast bars that have been verified to be GMO-free.
- ✓ A hidden ingredient that can essentially program your brain cells to kill themselves. It's in more than 6,000 grocery store items, including everything from soup mixes to sodas to chewing gum. Make sure this is not listed in the labels of the products you buy.
- ✓ A super type of food that, according to Engaged Health Solutions, has 31% lower levels of pesticides, fewer food-borne pathogens and more phenols, a substance believed to help fight cancer.
- ✓ The one produce that has more pesticides by weight than any other food. It's one of the main staples of the standard American diet.
- ✓ 15 fruits and vegetables that are normally clean from pesticides.
- ✓ A simple stamp that guarantees the safety of your food. Nearly 6,000 products already carry this safety stamp.
- ✓ The only cooking oil that's not genetically modified. It has the power to boost your immune system, lower your cholesterol, prevent strokes, slow down the aging of your heart, fight osteoporosis, and protect you against depression and cancer.
- ✓ 48 brands of breads and bakery items that have been verified to be GMO-free.
- ✓ An easy way to find out if sugar that's listed as an ingredient comes from genetically modified sugar beets.
- ✓ A sweetener that's derived from genetically modified microorganism. It's found in soft drinks, gum, candy, desserts, yogurt, and some pharmaceuticals such as vitamins and sugar-free cough drops. It has been

reported to cause migraines, nausea, depression, fatigue, tachycardia, insomnia, hearing loss, memory loss, and joint pain.

- ✓ 97 invisible GM ingredients. These are hiding in many processed foods. Look for these in the labels next time you buy a packaged food.
- ✓ 12 “dirtiest” produce items to avoid. These constantly test positive for pesticides.
- ✓ 5 brands of baby formula that contain genetically modified soy... and 9 brands that have one or more baby products that have been verified to be GMO-free.
- ✓ The best way to satisfy any sweet cravings.
- ✓ And much more, all explained in clear, easy to understand language.

We will happily send it to you right now, absolutely FREE. All we ask in return is that you RSVP at the end of this report to give our monthly publication, *Natural Health Solutions*, a risk-free try.

Start Living a Healthier Life Today

As I showed you today, our food system is broken. Corruption is everywhere.

From government agencies... to big agricultural and food companies... to research institutes... to Congress.

They'll lie and tell you something is good for you... as long as it helps corporations make a fortune and keep government officials in office.

As a result, people are getting a tremendous amount of bad information about basic health... information that could be leading to heart disease, cancer and diabetes.

Look, these days it's extremely easy to find health information online.

The problem is... a lot of it comes with an agenda.

But the truth is out there. And our goal is to find it.

That's why we created *Brad Lemley's Natural Health Solutions*.

We're 100% independent.

We receive no money from big pharma, big food, big agriculture or the government.

We have no hidden interests or secret agendas.

We only serve our readers. Naturally, the only way for us to grow is to give you information that will actually help you live a long, healthy life.

Which is why we only write about health tricks that are grounded in rock-solid evidence.

Sometimes our ideas go against the mainstream media. And sometimes they're downright controversial.

But they're always backed by solid scientific data.

At the helm of *Brad Lemley's Natural Health Solutions*, we also have someone who has skin in the game.

Meet Brad Lemley

As the editor of *Brad Lemley's Natural Health Solutions*, Brad gets to the bottom of what works and what doesn't.

As a former senior correspondent for *The Washington Post* and *Discover* magazine, Brad has shared his health secrets with hundreds of thousands of readers.

He has also reported cutting-edge science and health topics on television, National Public Radio, and in some of the nation's leading magazines, including *Psychology Today*, *Parade*, *Reader's Digest*, *Life* and many more.

More important, Brad is the kind of guy who walks the walk.

He's 59 years old, and he says he's in the best shape of his life... all thanks to the health secrets he writes about.

He's a lifelong fitness enthusiast who works out daily and follows the high-fat, moderate-protein, low-carb diet he recommends in his articles and books.

He is also an enthusiastic organic gardener and woodworker who designed and built his family's home back in the 1980s.

Each month, Brad will show you safe, natural, self-directed healthy living practices and therapies that will improve your life.

These are health secrets he has tried himself... and that are rooted in real science.

You'll discover secrets like...

- ✓ SEVEN natural ways to fight depression, reduce stress and live a happier life
- ✓ One food that's condemned by doctors and the media... but that could actually help you lose weight and reduce heart disease risk

- ✓ A simple eating habit that could slow aging to a crawl.
- ✓ A natural way to reduce your risk of diabetes, lower your chances of heart attacks, rheumatoid arthritis, and multiple sclerosis. It only takes 30 minutes a day, and it won't cost you a dime.
- ✓ Why one specific recommendation from the American Heart Association (AHA) could actually INCREASE your risk of heart disease.
- ✓ And much more...

Are you starting to feel what a wonderful difference all this information will make in your life?

You'll be part of an elite society dedicated to living healthier, more independently, and more freely than most Americans will ever know.

And you can live this way no matter who gets elected into the White House, Congress, or Senate... because you'll always be abreast of the latest breakthroughs to live your life to the fullest.

I believe this kind of unbiased health information is so important that my goal is to make these secrets available to anyone who wants to improve their life.

And that's precisely why I won't charge \$500 or even \$250 a year for the *Brad Lemley's Natural Health Solutions*. As a matter of fact, I'm determined to keep the cost of this life-changing information as low as I possibly can.

So for a limited time, I am offering a one-year, 100% risk-free membership to the *Brad Lemley's Natural Health Solutions* for less than your monthly phone bill.

And I'm so confident that you'll come to cherish each monthly issue of *Brad Lemley's Natural Health Solutions* that we're offering our best-in-the-business "**ANYTIME GUARANTEE.**"

Here's how it works: Click the button at the bottom of this report to enter your information into the no-obligation RSVP form.

In addition to your free book **Non-GMO Guide: Food Secrets for a Long and Healthy Life**,

You'll Also Get All 3 FREE GIFTS Listed Below

We want you to be 100% Satisfied with your *Brad Lemley's Natural Health Solutions* Subscription.

Check out a few months of our research. If during the course of your year-long trial subscription, you decide that the *Brad Lemley's Natural Health Solutions* is not improving your life in dramatic ways, just let us know. We'll send you a full refund of every cent you paid today, no questions asked.

And this money-back promise is good for as long as you're subscribed, so please enjoy as many issues as you like before making a decision.

And no matter what you decide, the book **Non-GMO Guide: Food Secrets for a Long and Healthy Life** and ALL three of your FREE GIFTS are yours to keep, just for trying out *Brad Lemley's Natural Health Solutions*.

In other words, there's no risk to you at all, so why not RSVP now to give it a try?

Once you RSVP, you'll get access to the following special reports...

Bonus Gift #1: Growing Up: The Vertical Gardening Guide

I realize that some of you may find very expensive to eat strictly organic. So, I want to show you an easy way for you claim healthy, mouthwatering food for just pennies on the dollar.

In this report, I'll reveal a food secret that has been rediscovered by international botanist Patrick Blanc.... a secret that reaches back to techniques uncovered by ancient Babylonians...

But with a special twist that lets you grow your own food...even if you live in a tiny apartment and can barely lift your shopping bag.

I'll show you how to use a 4 foot by 4 foot space to reclaim your food independence and grow your own food without relying on anyone else.

Imagine no longer having to depend on Monsanto and other food companies for food that's overpriced and potentially dangerous.

With this simple step-by-step guide, you'll able to grow your food even if you're a complete novice gardener and live in a tiny apartment.

This report teaches you everything you need to know to claim your basic right to food independence. Here's a sneak peak of some tricks you're going to discover:

- ✓ How to get 100 to 300 pounds of home-grown food from a tiny 4x4 plot.
- ✓ A “lazy” food trick that lets you grow your own food without heavy-lifting, bending and hard-work.
- ✓ One of the only ways you can grow food in cold areas.
- ✓ How to arrange your plants to get high yield tomatoes, sweet potatoes, peas, beans, and any other food you have your heart set on.
- ✓ The three things your plants need to grow fast, strong and healthy.
- ✓ And much more...

Imagine having COMPLETE control over what you and your family eat.

You'll get to pick the seeds, the soil and the water that is being used to grow your fruits and veggies. You'll have completely organic, GMO-free, fresh food right at your fingertips!

Over 260 hours of research and writing went into this project. But it should only take you about 20 minutes to read it.

And, just like the other 3 reports listed below, it won't cost you a penny. Once you RSVP, you'll get immediate access to this report.

Bonus Gift#2: The Little Bible of 77 Censored Health Cures

We recently published a controversial new book that contains nature's most powerful SHOCKING health cures and treatments...

Natural treatments for:

- ✓ Cancer
- ✓ Diabetes
- ✓ Heart attacks
- ✓ High cholesterol
- ✓ Joint pain
- ✓ Alzheimer's

- ✓ Sexual dysfunction
- ✓ And more...

These cures and remedies require no expensive or dangerous prescription drugs.

No slicing or cutting with life-risking surgeries.

No terrible side effects like those from chemo.

And no liver-wrecking drugs that break down your body.

Cures like the one I call “the Virgin Mary cancer cure”, which uses nothing but an unusual process of fermenting an ordinary grain germ with baker’s yeast...

But yields a powerful extract that helps bully cancer out of your body.

Or cures like...

A mouthwatering food that contains a super-nutrient that works like Roto-Rooter, keeping your prostate fit, healthy, and incredibly clean.

Best yet, you can buy this food in Aisle 13 of your supermarket for less than \$2 per pound... and it’s tasty enough that you’ll be left wanting even more when you’re finished!

You’ll find those cures and 75 more just like ’em in **The Little Bible of 77 Censored Health Cures**.

Inside you’ll discover cures like...

- ✓ The Brazilian tree extract with 200% MORE antioxidant power than acai!
- ✓ The #1 LIE about breast cancer... that could cost lives!
- ✓ Another “miracle molecule” that can help you battle cancer. It’s so strong, it’s even been used to fight AIDS!
- ✓ The one type of whisky (produced only in a certain region of the world) that actually has MORE of a cancer-fighting antioxidant called ellagic acid than red wine!
- ✓ Two vitamins to take as “heart attack protection” before a high-fat meal. They expand your arteries and dilate blood vessels.

Bonus Gift#3: Sin Foods for Healthy Living

This book isn't available for sale anywhere in the world, at any price. But it's yours free as a new member.

How often do you find yourself staring at a menu wondering what you should choose?

You might really want to order a mouthwatering rack of ribs and an ice-cold pint of beer. I know I do.

But the little voice in the back of your head — or, let's be honest, your spouse's voice from over your shoulder — encourages you to pick the healthy option.

Is there anything more frustrating than denying yourself the foods you want and not seeing any results?

If that's how you feel, it's not your fault.

Like I said before, the so-called "facts" we receive from the media, big food corporations and the government about our food are just flat-out wrong.

It turns out that many of the meals you've been considering healthy options are actually worse for you in the long run.

In some cases, the foods you're longing to eat are the better choice, even if you're being told the opposite.

Yes, many of the so called "sin foods" are actually good for us.

In this report, we'll reveal the truth about what's good and what's bad to eat. For example, you'll discover:

- ✓ The popular diet you should **AVOID** at all costs. Most people follow this diet, but it's keeping Americans fatter and sicker than anyone else in the developed world.
- ✓ If you're preparing your meals with this cooking oil, stop it! It increases the risk of heart disease and cause inflammatory immune responses.
- ✓ A surprising ingredient to add to your coffee. This would make most health nuts squirm. But one tablespoon will help not only give you more energy, but also make your coffee smooth, creamy, and delicious... without having to add sugar or processed creamers.

- ✓ Simply cut this from your diet, and watch your body become a fat-burning machine.
- ✓ The easiest way to eliminate “man boobs”... without exercising. You could do this from the comfort of your couch, while you watch TV.
- ✓ Should you go for a low-fat yogurt with fruits or a bacon and cheddar omelet? The answer will shock you.
- ✓ Love pancakes, mashed potatoes, and pizza? No problem. Here’s how to ENJOY those foods without risking your health.

This exclusive report is also yours free, as soon as you join us.

And that’s only the beginning of the benefits you’ll receive when you RSVP today.

You see, we release exclusive reports like these all the time to our members. Once you RSVP, you’ll get instant access to all past and future reports we publish.

RSVP Now

You Can Review Your Order Before it's Final

Imagine your life just a few months from now...

Imagine knowing exactly which foods are dangerous... and which ones will help you and your loved ones live a longer, happier life...

And imagine the immediate benefits you’ll experience as you discover dozens of new health secrets

And remember – this is all 100% guaranteed.

If you ever decide, for any reason, this isn’t right for you, simply let us know and you’ll receive a full, prompt and courteous refund.

There’s nothing you have to give back...

No “conditions” you need to meet.

You’re either thrilled with our research or you are eligible for a refund.

And the book **Non-GMO Guide: Food Secrets for a Long and Healthy Life** *plus ALL the three special reports we’ve mentioned here* are yours to keep, FREE, FOREVER, no matter what.

I sincerely hope you'll consider this offer seriously. And please feel free to...

Forward this Message to as Many People as Possible

Because, as I showed you in this presentation, most Americans are eating GM food, without knowing it's dangerous.

We've seen something similar before with tobacco.

Just like people used to smoke cigarettes because they had no idea it could kill them, most Americans today are eating this food because they are unaware of the risks.

The gigantic human lab experiment that's going on with GMOs is only about 10-15 years old. So, we are likely decades away from tabulating the human casualties.

But there's already plenty of evidence that genetically modified foods could cause damage to your health.

The bottom line is that, today, you have a choice...

You Can Either Take Action or Continue to Trust Big Seed Companies and the FDA

Did you know that Monsanto has a long history of deceiving the public just to make money?

This is the same company that said its chemical PCB was safe.

You may have heard about the scandal in Anniston, Alabama. For nearly 40 years, Monsanto routinely dumped a toxic chemical called PCB into the town's landfill and creek.

Those who lived closest to the Monsanto plant got cancer and liver problems.

While the company told the public PCB was safe, internal memos showed the company knew it was highly toxic.

Thousands of pages of company documents – many containing warnings such as “CONFIDENTIAL: Read and Destroy” -- show that for decades, the company concealed what it did and what it knew.

In 1975, for example, a company study found that PCBs caused tumors in rats. They ordered its conclusion changed from “slightly tumorigenic” to “doesn’t appear to be cause cancer.”

In one of the internal memos, one of the managers justified the company’s despicable actions by saying “we can’t afford to lose one dollar of business.”

No wonder Monsanto is known as “the most evil corporation in the world.” They have proved time and time again that no price is too high to pay when it comes to achieving their profit goals... even when the price is that of human lives.

And that’s not the only example.

The company has also sold other highly toxic products, such as Agent Orange, DDT, and Aspartame. And the company said they were all safe for humans.

But today, Agent Orange and DDT are outlawed due to the massive damage they cause to human life. Agent Orange, for example, has killed and maimed an estimated 400,000 people and lead to 500,000 birth defects.

And scientific research has linked Aspartame to birth defects, cancer, diabetes, emotional disorders and seizures.

Today, Monsanto is the leader in genetically modified seeds. And they say GM food is safe.

Given their track record, I wouldn’t trust them if I were you.

Why gamble with your and your family’s health when there are so many other alternatives to the potentially toxic goods of the big agricultural firms?

And remember... if you trust the FDA, you’re essentially putting your trust in these companies.

As I showed you today, many of their former employees are running the FDA. So I wouldn’t expect the government to protect you.

That’s why you need to take action today.

Your health and the health of your loved ones depend on it.

Contrary to what the big food corporations think, you still have a choice as to what you put into your body and onto your family’s dinner table.

You can still avoid developing horrible diseases simply by choosing food that is good for you and that will keep you healthy.

To get started, simply click on the button at the bottom of this presentation to enter your information into the no-obligation RSVP form.

Once you do that, you'll have full access to all our research... your personal copy of **Non-GMO Guide: Food Secrets for a Long and Healthy Life...** your first issue of *Brad Lemley's Natural Health Solutions*... and all three special reports I've mentioned here.

Fox news has already been forced to censor coverage of this scandal. I showed you today

So, this video could be banned any time. Claim your free book now, before it's no longer available.

Thank you so much for listening to this important presentation.

I promise you, it was time well spent – and signing up to get our research will be one of the best health moves you'll ever make.

Because while everyone else will continue to eat food that's potentially dangerous... and keep getting sick, without really knowing the source of their pain and suffering...

You will have all the information you need to make smarter, healthier choices about the foods you buy. You'll even know how to grow your own food, if you choose to do so.

So please... don't wait any longer to begin securing a lifetime of health for yourself and your family.

Don't you and your loved ones *deserve* to live a longer, healthier, happier and more independent life?

Click the button below to RSVP now!

Sincerely,

Doug Hill
